

VPS Cleanup Report — 2026-07-10

July 10, 2026

Summary

Metric	Before	After	Reclaimed
Disk Usage	68 GB (71%)	42 GB (44%)	26 GB
RAM Usage	4.7 GB / 11 GB	4.6 GB / 11 GB	Stable
Docker Images	41 (29 GB)	11 (18 GB)	11 GB
Docker Volumes	23 (8.1 GB)	11 (3.7 GB)	4.4 GB
Local Files	~11 GB	~0.5 GB	~10.5 GB

What Was Deleted

1. Docker Images (~11 GB reclaimed)

Image	Size	Reason
infra-jarvis-core	906 MB	Jarvis core removed weeks ago
infra-google-mcp	329 MB	Google MCP removed today
lfnovo/open_notebook:latest	1.83 GB	Duplicate; using latest-single
mcr.microsoft.com/playwright	2.59 GB	Old test dependency
rust:1.76-slim	789 MB	Old build dependency
n8n dangling tag	1.5 GB	Orphan from rebuilds
postgres dangling tag	445 MB	Orphan from rebuilds
<none> dangling x12	~7 GB	Build layer orphans
Build cache	0 B (already pruned)	docker builder prune

2. Docker Volumes (~4.4 GB reclaimed)

Volume	Size	Reason
omnivoice-data	3.0 GB	DUPLICATE; infra_omnivoice_data is active
sdg_pg_data	85 MB	Old compose project 'sdg_'
sdg_neo4j_data + logs	516 MB	Old compose project 'sdg_'
sdg_qdrant_* x3	40 MB	Old compose project 'sdg_'
sdg_langfuse_data	65 MB	Old compose project 'sdg_'
sdg_n8n_data	48 KB	Old compose project 'sdg_'
sdg_redis_data	8 KB	Old compose project 'sdg_'
infra_google_mcp_data	4 KB	Google MCP removed
n8n_data, on_surreal_data	~70 KB	Orphans from manual docker run

Volume	Size	Reason
open_notebook_data	12 KB	Orphan from manual docker run
scrapers_crw-data	4 KB	Orphan volume

3. Local Files (~10.5 GB reclaimed)

Path	Size	Reason
hermes-agent/venv	5.5 GB	Old standalone Hermes (active is ~/.hermes/)
~/.cache/*	4.8 GB	pip/npm/uv build cache
mystika/	502 MB	Abandoned product
backups/*/node_modules x6	378 MB	Duplicate across 6 backup snapshots

Final VPS State

Metric	Value
Disk (/)	42 GB used / 96 GB (44%)
RAM	4.6 GB used / 11 GB (6.7 GB available)
Swap	1.5 GB used / 2 GB
Docker containers	13 running, 0 stopped
Docker images	11 (18 GB)
Docker volumes	11 (3.7 GB), all infra_* active
Ollama models	qwen2.5:3b (1.93G) + nomic-embed-text (0.27G)
Services verified	All 12 core + 3 products responding

Lessons Learned

1. Docker Compose project name matters

Old compose files used project name `sdc_` while new ones use `infra_`. This created duplicate volumes (`sdc_pg_data` vs `infra_pg_data`) that persisted unused for weeks.

Fix: Always use `--project-name` explicitly or keep compose files in consistent directories so volume names don't drift.

2. docker run creates orphan volumes

Manual `docker run` commands create volumes outside compose lifecycle. When transitioning to `docker-compose`, old volumes (`open_notebook_data`, `on_surreal_data`) become orphans.

Fix: Integrate containers into compose immediately and remove manual containers afterward.

3. Image tags diverge without cleanup

`lfnovo/open_notebook:latest` became unused when upgrading to `:latest-single`. `n8n` and `postgres` had dangling tags from builds.

Fix: Run `docker image prune -a` periodically (monthly).

4. omnivoice-data duplication (3 GB)

The OmniVoice container was initially run manually creating `omnivoice-data` volume, then docker-compose created `infra_omnivoice_data`. Both held identical data (3 GB each).

Fix: Verify volume names when migrating containers to compose.

5. Build cache accumulates silently

Docker build cache accumulated to 2.5 GB from 5 custom Dockerfile builds.

Fix: Add weekly `docker builder prune -a -f` to cron.

6. Standalone Hermes venv persisted

`hermes-agent/venv` (5.5 GB) remained after Hermes was installed globally. The active Hermes uses `~/.hermes/` config, not the standalone venv.

Fix: Document migration paths and clean up old venvs after upgrades.

7. Cache is expensive on small disks

`~/.cache/` grew to 4.8 GB from pip/npm/uv installs during development. On a 96 GB disk, that's 5% of total space.

Fix: Add `rm -rf ~/.cache/pip ~/.cache/npm ~/.cache/uv` to cleanup scripts, or increase disk size.

8. Backup node_modules duplicates

Each backup snapshot contains `.opencode/node_modules` (63 MB each x6 = 378 MB total).

Fix: Add `node_modules` to backup exclusion list or clean before compress.
